

FUNKY SMELL?

IT MIGHT BE DRY DRAIN

WHAT IS DRY DRAIN?

This occurs when the sink and drains have not been used, and the trap dries out allowing odors to migrate up into the room.

IT'S AN EASY FIX!

Run water in all sinks periodically or pour water down floor drains from time to time (once a month is recommended). This will keep the traps wet/full and sealed, preventing odors from escaping.

**Mineral oil can be used and lasts longer.
